

POLISHED GOLD

Gold, a supremely noble metal, creates a prestigious finish which is synonymous with purity and more commonly associated with jewellery. Now a staple in interior design and tap fittings especially, Polished Gold is a choice made no less bold by its popularity; it is appearing increasingly in contemporary and industrial designs.

Reference: F01

CHARACTERISTICS

The polished finish is the result of a deposit of 24 carat gold 3N, over a polished nickel underlay, with thickness up to 2µm depending on purpose. The almost 100% purity of the deposited gold assures excellent resistance to corrosion and durability. With suitable care, the coating will maintain its sparkle.

ADVICE

Ease of cleaning: Delicate
Corrosion resistance: Good
Scratch resistance: Delicate
Resistance to cleaning products: Good
